Wireless
Handheld Ultrasound
for iOS and Android

Great Image Quality is Just the Beginning

Clarius is unlike any other handheld ultrasound device. It produces high-resolution images and transmits them wirelessly to most iOS or Android smart devices. With many automated imaging controls, including optimal gain and frequency settings, Clarius is almost as easy to use as the camera on your smart phone.

There's an app for that

Designed for speed and optimized for excellent imaging, the Clarius App lets you start scanning almost instantly. Clarius operates with most iOS or Android smart devices. Simply download the free Clarius App and you can start scanning with the touch of a button.

Convex and virtual phased array imaging on one device

The Clarius C3 Scanner is designed for scanning all parts of the patient's torso, including the heart. The convex array provides outstanding resolution for abdominal and lung images. Select the cardiac option to activate the virtual phased array mode to enable cardiac imaging at high frame rates through the ribs.

3-in-1 Scanner

With optional Clarius Clip-ons and virtual phased array and linear software, you can carry one multi-purpose scanner in your pocket. Use a linear clip-on for superficial structures and virtual phased array for quick looks at the heart. It's ideal for first responders and physicians who need to move quickly from patient to patient.

Wireless freedom for procedures

The Clarius L7 Linear Array Ultrasound Scanner is ideal for guiding procedures. Easy to sterilize and keep clean. See fine detail from 1 to 7 cm.

No wires

Clarius uses WiFi Direct to connect to its app on the device (or devices) you choose for imaging. Once you download the app, Clarius does not require Internet access to operate.

| Model | Frequency | Depth |
|-------|------------|-----------|
| C3 | 2 - 6 MHz | 3 - 30 cm |
| L7 | 4 - 13 MHz | 1 - 7 cm |
| C7 | 3 - 10 MHz | 2 - 15 cm |

Clarius Cloud

Clarius Cloud is a secure, web-based portal that allows you to save, review, manage and share images acquired with your Clarius Scanner.

About Us

Clarius Mobile Health was founded by experienced innovators who have played an instrumental role in the ultrasound industry. Our developers were the brains behind the first PC-based platform for ultrasound research. They also introduced the first touch screen ultrasound system with a simplified user interface.

We started with a simple mission: to enable more clinicians to use ultrasound to improve patient care. Thanks to the power of smart phones, advanced technology and decades of collective ultrasound experience, the Clarius team has delivered a high quality, point-and-shoot ultrasound™ device that works with virtually any smart device.
